FX ANALYTICS

DATA TO EMPOWER BUSINESS

INTRODUCTION

FX Analytics takes the data that is captured in FieldFX Mobile and Backoffice and empowers users to generate reports and dashboards from that data, providing information that is more serviceable, resulting in a dynamic view of the business

Traditionally, service companies in the energy industry used paper and Excel sheets to capture data. As we all know, these types of data-capture are antiquated and are not repositories that can be easily reported against. FieldFX takes digital data, already existing in the system, and makes it accessible for reporting within FX Analytics.

Dashboards

The Executive Dashboard is the most popular dashboard. This dashboard gives our customers the ability to see revenue numbers behind the scenes. Powered by real-time data from the field tickets that result from price books and the quotes- the Executive Dashboard is a powerful tool for strategic decision-making.

- Revenue by office
- Revenue by customer
- Job profitability
- Job cost
- Tickets by job

Another common dashboard is the Operations Dashboard. This empowers our customers to have statistics in real-time for efficient and streamlined operations.

- Crew hours
- Crew utilization
- Certifications expiring Score card
- Equipment utilization Incident management
- Equipment plans

Dashboards are meant to be a visual representation of data. Each one of the dashboard components are clickable to generate a report based on the data required. Each field of the report is drag and drop; this gives our customers the ability to customize their report to meet their daily needs. Any data that is captured within FieldFX is reportable and can be turned into a visual dashboard.

Scheduling

FX Analytics will bring the data to you. Users have the ability to schedule a dashboard to run a report periodically without having to login back into the system. The system will run the scheduled report and send you the data in real time.

Custom Fields

Our customers also have the ability to create custom fields that they can report on in real-time. The reporting capabilities of standard fields, created by FieldFX, are the same for custom fields, created by the customer. The system can easily aggregate custom fields on to reports once the field is configured.

Complete Mobile Field Operations Management Solutions

The FieldFX product suite is a complete mobile field operations management solution, providing companies in the oilfield, industrial and environmental services industries with the ability to organize and manage jobs, quotes, field tickets, equipment, contracts, price books and labor along with customer-specific electronic forms.
